

ROVIMIX® BCK

A combination of vitamin B complex, C and K₃ used in drinking water

Content of Product:

It is a combined product consisting of vitamins B₁, B₂, B₆, B₁₂, Calcium Pantothenate (Vit B₅), Niyasinamid (Vit B₃), Folic acid (Vit B₉), D Biotin (Vit B₇), vitamin C and K₃.

It is used in poultry and other farm animals to eliminate deficiencies caused by B complex, C and K₃ vitamins.

Main recommended areas of use;

After antibiotic treatments, especially sulfa group antibiotics reduce the absorption of B complex vitamins, it is necessary to meet the requirements of B complex vitamins of poultry in order to maintain the balance of the disrupted digestive system flora.

Supporting the nervous system of poultry with B-complex vitamins reduces the yield losses, especially in the development periods, in order to reduce the negative effects of all the stress factors of the animals. For these reasons, animals should be supported in terms of B complex vitamins through drinking water during stress periods.

Recommended doses;

It is used by adding 100 gr (2 scale) to 1 ton of drinking water as a preventive.

Packaging;

1 kg plastic bottle (with 50 gr Scale)

Shelf life;

24 months under suitable storage conditions.
